*Preface*

*vii*

|                  |   |           |
|------------------|---|-----------|
| <b>Chapter 1</b> | <b>Introduction .....</b>                                   | <b>1</b>  |
|                  | History of Automatic Control .....                          | 2         |
|                  | Control Engineering .....                                   | 3         |
|                  | Controller (Control Theory) .....                           | 5         |
|                  | Control Strategies .....                                    | 8         |
|                  | Strategic Control .....                                     | 10        |
|                  | Control Logic .....   | 12        |
|                  | Negative Feedback .....                                     | 13        |
| <br>             |   |           |
| <b>Chapter 2</b> | <b>Advanced Process Control System .....</b>                | <b>23</b> |
|                  | Advanced Process Control .....                              | 24        |
|                  | Process Reaction Curve .....                                | 26        |
|                  | Feed Forward (Control) .....                                | 32        |
|                  | Process Control .....                                       | 37        |
|                  | Computer Process Control .....                              | 39        |
| <br>             |   |           |
| <b>Chapter 3</b> | <b>Mathematical Modelling .....</b>                         | <b>46</b> |
|                  | Introduction and Basic Operations .....                     | 46        |
|                  | Eigenvalues and Eigenvectors: An Introduction .....         | 52        |
|                  | Rules for Computing Laplace Transforms of Functions .....   | 64        |
|                  | Laplace Transform of the Derivative .....                   | 65        |
|                  | Determining the Inverse Laplace Transform .....             | 66        |
|                  | Differential Equations .....                                | 67        |
|                  | Partial Differentiation and Vector Calculus .....           | 73        |
| <br>             |   |           |
| <b>Chapter 4</b> | <b>Application of MATLAB in Automatic Control .....</b>     | <b>79</b> |
|                  | MATLAB .....  | 79        |
|                  | Functions MATLAB Functions of MATLAB .....                  | 83        |
|                  | Basic MATLAB Commands .....                                 | 87        |
|                  | The MATLAB System .....                                     | 92        |
|                  | Computer Number Format .....                                | 93        |
|                  | State-Space Methods for Controller Design and MATLAB .....  | 99        |
|                  | Using MATLAB in Mathematics Classes .....                   | 106       |
|                  | Using MATLAB for Solving ODEs: Initial Value Problems ..... | 108       |
|                  | Differential Equations on a Disk .....                      | 114       |
|                  | 2 Basic Operation .....                                     | 120       |
|                  | MATLAB - Transforms .....                                   | 130       |

|                  |   |            |
|------------------|---|------------|
|                  | Solve Algebraic Equation .....  | 134        |
|                  | Solving Basic Algebraic Equations in MATLAB .....                       | 138        |
|                  | Solving .....   | 145        |
| <b>Chapter 5</b> | <b>Design of Controllers .....</b>                                      | <b>148</b> |
|                  | Observer Design Pattern .....   | 153        |
|                  | Observer Pattern .....  | 154        |
| <b>Chapter 6</b> | <b>Motor Control System .....</b>                                       | <b>158</b> |
|                  | Motor Controls .....  | 158        |
|                  | Process of Motor Control .....  | 165        |
|                  | Coordination .....  | 167        |
|                  | Industrial Motor Control: Symbols and Schematic Diagrams .....          | 171        |
|                  | Perception in Motor Control .....                                       | 198        |
|                  | AC Motors: General Principles of Operation (Motors and Drives) .....    | 201        |
|                  | Physiological Basis of Motor Control .....                              | 207        |
| <b>Chapter 7</b> | <b>Automatic and Distributed Control System .....</b>                   | <b>211</b> |
|                  | Control System .....  | 211        |
|                  | Types of Processes Using Process Control .....                          | 214        |
|                  | Closed Loop Control System .....  | 216        |
|                  | Analyzing and Improving Control Loop Performance .....                  | 219        |
|                  | Feedback Loop Analysis of Power Supply Control Loops .....              | 230        |
|                  | Controlling Mechanism System of Actuator .....                          | 232        |
|                  | Distributed Control System .....  | 235        |
| <b>Chapter 8</b> | <b>Control Systems and Engineering Discipline Management .....</b>      | <b>242</b> |
|                  | Model Predictive Control .....  | 242        |
|                  | Classical Control Theory .....  | 246        |
|                  | Limitations of PID Control .....  | 248        |
|                  | PI Control of the Heat Exchanger .....                                  | 255        |
|                  | Integral (Reset) Windup, Jacketing Logic and the Velocity PI Form ..... | 261        |
|                  | PID Control and Derivative on Measurement .....                         | 268        |
|                  | Measurement Noise Degrades Derivative Action .....                      | 279        |
|                  | PID Disturbance Rejection of the Gravity Drained Tanks .....            | 283        |
|                  | Using Signal Filters in Our PID Loop .....                              | 289        |
| <b>Chapter 9</b> | <b>Automatic Process Control .....</b>                                  | <b>295</b> |
|                  | Sensor .....  | 295        |
|                  | Measurement .....   | 297        |
|                  | Closed-Loop Control .....   | 299        |
|                  | Open- vs. Closed-loop Control .....                                     | 302        |
|                  | Closed-loop Systems .....   | 307        |
|                  | Simple Signal Injector Aids Control-Loop Analysis .....                 | 315        |
|                  | Closed Loop Open Loop Control System .....                              | 323        |
|                  | <b>Bibliography .....</b>   | <b>327</b> |
|                  | <b>Index .....</b>  | <b>329</b> |

# Index

## A

Adapting Environment 150, 152  
Adrenocorticotrophic Hormone 22  
Advanced Process Control 23, 24, 26  
Advanced Process Control System 23  
Advanced Regulatory Control 24  
Ancient Greece 2  
APC Business and Professionals 26  
Automatic Process Control 295  
Automation in Daily Life 42

## B

Basic MATLAB Commands 87, 88  
Biology and Chemistry 21  
Bumpless Operation 249

## C

Closed Loop Control 1, 166, 211, 216, 217,  
300, 307, 308, 309, 314, 315, 325  
Cohen-Coon Method 30  
Command Window 84, 85  
Computer Process Control 39, 40, 41  
Control Engineering 3, 4, 79, 242, 242, 302  
Control Logic 12  
Control Strategies 8, 9, 23, 198, 200  
Control Theory 1, 2, 3, 4, 5, 6, 7, 16, 24, 32,  
35, 166, 202, 217, 250, 254, 255, 302,  
303, 326  
Corticotropin-releasing Hormone 22

## D

Design of Controllers 148, 242  
Distributed Control System 24, 211, 216,  
235, 236

## E

Error-controlled Regulation 17

## F

Feed Forward (Control) 32  
Feed-forward 7, 8, 32, 33, 34, 36, 248, 249,  
250, 310  
Filters Add Delay 290  
First and Second World Wars 2  
Function Handles 80  
Functions MATLAB Functions of MATLAB  
83

## G

Gene Regulation and Feed-forward 36  
Generating Matrices 89

## H

History of Automatic Control 2

## I

Industrial Revolution in Europe 2  
Inferential Control 25  
Information Based Control 200  
Input and Control Variables 5  
Interconnectivity of Process Control 38  
Inverse Laplace Transform 66, 132

## L

Laplace Transform 4, 64, 65, 66, 67, 131,  
135, 136, 248, 255  
Linear Control 3, 213, 324  
Links to other Tools 12  
Logic Control 212

Long Distance Telephony 36  
Loop Measurement 321

### M

Mathematical Modelling 3, 46  
MATLAB Toolboxes 91  
Measurement Noise 226, 279, 281, 282, 292  
Mechanical Engineering 4, 20  
Model Predictive Control 25, 242, 245  
Modern Control Theory 5, 247  
Motor Control System 158, 313  
Multi-loop Closed-loop System 311  
Muscle Motor Unit Recruitment 210

### N

Negative Feedback 1, 13, 14, 15, 16, 17, 18,  
19, 20, 21, 22, 36, 212, 213, 218, 259,  
295, 325, 326  
Nested Functions 85  
Numbers in Programming Languages 98

### O

Observer Design Pattern 153  
Observer Pattern 153, 154, 155  
Open Loop Control 6, 34, 166, 199, 211, 242,  
325  
Open System 35  
Operational Amplifier Circuits 19  
Oscillating Process 222

### P

Performance Metric 296  
Physiological Feed-forward System 36  
Plant Measurement 318, 320  
Process Control Structures 37  
Process of Motor Control 165  
Process Reaction Curve 26, 29, 31  
Proof of the Theorem 63

### R

Random Deviations 226  
Related Technologies 25  
Research Environment 152  
Rules of Thumb 154

### S

Sensorimotor Feedback 165  
Stacked Push Buttons 180, 181  
Statistical Process Control 25  
Strategic Control 10, 11, 12

### T

Thermal or Magnetic 235  
Traditional Design Process Models 149  
Translation Property 65  
Tuning Parameters 259, 266, 268, 275, 279,  
281  
Types of Control Systems 34, 324  
Types of Controlling System 7

### U

Under Control System 323  
Under-damped Furnace Example 213  
Understanding Derivative Action 272  
Unit Tangent Vector 75

### V

Vector Calculus 73  
Vector Functions 73, 83, 84  
Virtual Instrumentation 233  
Voltage Source Inverter 164

### Z

Ziegler-Nichols Closed-loop Tuning Method  
28  
Ziegler-Nichols Method 27, 30

---
