Abstract

The purpose of this study was to determine the production efficiency of Oro Verde as a manufacturing firm, in the Province of Guimaras.

The respondents were 30 employees of Oro Verde Holding and Development Corporation as a manufacturing firm. The instrument used to gather data for the study was an adopted instrument from Dr. Victor Jaleco (1994). Simple descriptive statistics were employed in the analysis such as frequency counts, percentage distributions, and mean.

The results revealed that the Production efficiency of Oro Verde Holding and Development Corporation was "highly efficient" except for those employees whose number of years of service is more than 10 years.
